EDUCATION

University of Alberta

Bachelor of Science in Computer Science with Specialization

Edmonton, Alberta

September 2020 - December 2025

Relevant Coursework: Compiler Design, Parallel & Distributed Systems, 2D Game Engine Design, Network Security, Embedded & Robotic Systems, Computer Architecture, Databases, Reinforcement Learning, Operating Systems, Competitive Programming & Algorithm Design, Machine Learning & AI

EXPERIENCE

Jobber

Software Engineer

May 2025 – Present

Edmonton, AB

- Building full-stack features in **Ruby on Rails**, **TypeScript**, and **GraphQL** for a platform serving 100k+ businesses.
- Migrated **React islands** in **Rails** views to a **React SPA**, improving maintainability and developer velocity.
- Optimized **Searchkick** reindexing for integration with **The Home Depot** (4M+ products at 2,000+ stores).
- Researched indexing strategies via **Sidekiq** dropping reindexing time from over 6 hours to 45 minutes.
- Implemented cross-team refactors across quotes, scheduling, and other external domains, coordinating with stakeholders on technical approach within a large monolith.
- Prototyped and added **Apollo** caching with useFragment hooks to get around technical limitations with asynchronous GraphQL queries, allowing hydration of data from third party API application after initial payload.

Activision

Software Developer Intern

May 2024 – May 2025

Vancouver, BC

- Built **Call of Duty: Black Ops 6** leaderboard UI running in an in-game browser, a stripped-down **React** runtime on PS5/Xbox constrained by leftover game memory, requiring strict optimization to prevent crashes.
- Engineered performant components for in game leaderboards and combat record under hardware memory limits using memoization, lazy loading, and CDN caching of player assets to minimize runtime footprint.
- Designed and shipped a Discord bot from scratch using **Java/Discord4J** as an intern-only project providing real-time player stats to the community. Involved rate-limiting and scaling shards for a server with over **650k users**, and prototyping **distributed sharding configurations**.
- Maintained code quality with **Jest** unit testing and snapshot tests across all UI components improving confidence in complex refactors for localization text.
- Refactored legacy code from **Modern Warfare 3** to improve maintainability and performance.
- Solely owned multiple features including the **Top 250 Leaderboards** and **Cod League Hub** for ranked play.

Freelance

Full-Stack Developer

May 2023 – May 2024

Remote

- Built an e-commerce platform (shop.vanquished.gg) for **8,000+ users** using **SvelteKit**, **Go**, and **PostgreSQL**.
- Integrated **Stripe** payments and **Discord OAuth** for virtual currency system with real-time purchase tracking.
- Developed one-off applications for multiple clients using **Go** and **PostgreSQL** with auth and payment integrations.
- Refactored legacy **python** projects for clients to improve stability and performance, and resolve memory leaks.

Alberta Chambers of Commerce

eCommerce Process Engineer Intern

October 2021 - May 2024

Edmonton, AB

- Brought on as a summer intern, and continued to work as chamber platform coordinator in charge of the Shop Local Chamber Market, and a CRM platform for local Chambers of Commerce in Alberta.
- Developed automation scripts for survey aggregation with **Go**, collecting data from province-wide responses.
- Worked with developers to beta test platform features and provide feedback from business owners.
- Supported the onboarding and technical support of businesses across Alberta to a CRM platform and online marketplace.

PROJECTS

Gazprea Compiler | C++, LLVM, MLIR, ANTLR4 | [Specs](#)

- Built a full compiler from scratch: lexer/parser (**ANTLR4**), and code generation targeting **LLVM IR** via **MLIR**.
- Implemented language features including functions, loops, conditionals, type inference, and 2D array operations.
- Setup self-hosted github actions to run hundreds of tests in parallel for benchmarking and feature coverage.
- Developed a second smaller compiler from scratch that targets three assembly languages: x86, ARM, and RISC-V.

Prize Bot | Go, PostgreSQL, AWS, Stripe, SvelteKit | [GitHub](#) | [Website](#)

- Built and scaled a **Go** Discord bot to track **1,000+ servers** and **380,000+ users** handling auction and giveaway events and prize distribution through automated ticket system.
- Integrated **Stripe** for subscription billing and **PostgreSQL** for persistent data storage.
- Implemented **SvelteKit** frontend with support for all existing bot configurations, and new advanced options.

2D Game Engine | C++, OpenGL, SFML

- Built a 2D game engine in **C++** using **SFML** and **OpenGL** shaders, designed around ECS architecture.
- Implemented a physics engine for 2D collisions movement, gravity, and camera control with animated sprites.
- Setup self-hosted github actions to ensure C++ build system compiles consistently across multiple platforms.

Multiplayer Poker Engine | Rust, SvelteKit, PostgreSQL | [Website](#)

- Engineered a networked multiplayer poker server in **Rust** with async game loops via **Rocket** with **mongodb**.
- Implemented multiple poker variants in a **SvelteKit** frontend with real-time **websocket** communication.

Rust Arduino Game | Rust, Arduino

- A 2D two player game in **Rust** using **Arduino** with a physical breadboard controller.
- Used **Bevy Engine** for game logic frontend, communicating through websockets from the Rust backend.

ServerSearch | Go, PostgreSQL, NextJS, React | [Website](#)

- An advertisement platform for gameservers developed with **Go**, **PostgreSQL**, and **NextJS**.
- Supports organizational level user configuration and role heirarchy with authentication via **Discord OAuth**.

TECHNICAL SKILLS

Languages: Go, Rust, TypeScript, C/C++, Python, Java, JavaScript, Ruby, RISC-V/ARM/x86 Assembly, SQL,
Frameworks: React, Rails, SvelteKit, Next.js, Rocket, Tailwind, React Native, HTMX, Node.js, LLVM/MLIR
