Experience

Software Engineer (Full-time) May 2026 – Present
Jobber *Edmonton, AB*

- Designed multi-supplier support across Supply's backend and frontend, covering catalogs, account connections, and pricing. Isolated catalog search indexes and imports, with staged migrations for supplier and catalog identifiers.
- Built Pricebooks' data models and GraphQL APIs for reusable materials, labour, and services, including supplier catalog synchronization, saved component prices, and permissions for internal costs.
- Added account-specific supplier prices to catalog search, quote line items, and product details. Unified price selection and display across Rails and React.

Software Engineer Intern May 2025 – May 2026
Jobber *Edmonton, AB*

- Built catalog search and quoting features in Rails, React, TypeScript, and GraphQL for The Home Depot integration, covering **4M+ products** across **2,000+ stores**.
- Helped cut catalog reindexing from **6+ hours to 45 minutes** with parallel Sidekiq jobs.
- Built the Home Depot pricing service with batched GraphQL queries and Apollo caching for asynchronous price loading.
- Migrated React islands embedded in Rails views to a React single-page application.
- Coordinated and implemented cross-team refactors across quoting and scheduling in Jobber's monolith.

Software Developer Intern May 2024 – May 2025
Activision *Vancouver, BC*

- Owned the **Top 250 Leaderboards** and **CoD League Hub** for ranked play in Call of Duty: Black Ops 6.
- Built leaderboard and combat-record UI in a stripped-down React runtime inside the game's browser on PS5 and Xbox. Used memoization, lazy loading, and CDN caching to fit within memory left by the game.
- Designed, built, and shipped a Java/Discord4J player-stats bot from scratch for a **650k+ user** community, with rate limiting and shard scaling; prototyped distributed sharding.

Full-Stack Developer May 2023 – May 2024
Freelance *Remote*

- Built the e-commerce site shop.vanquished.gg for **8,000+ users** using SvelteKit, Go, and PostgreSQL.
- Added Stripe payments and Discord OAuth login, with real-time tracking of virtual currency purchases.
- Built Go and PostgreSQL applications for multiple clients with authentication and payment integrations.

Chamber Platform Coordinator October 2021 – May 2024
Alberta Chambers of Commerce *Edmonton, AB*

- Supported Alberta businesses and local chambers with onboarding and troubleshooting for the Shop Local Chamber Market and a CRM platform.
- Collected feedback from business owners and beta-tested platform updates with developers.
- Wrote Go scripts to aggregate province-wide survey responses.

Technical Skills

Languages: Ruby, TypeScript, Go, Rust, C/C++, Python, Java, JavaScript, SQL, x86/ARM/RISC-V Assembly
Frameworks: Rails, React, React Native, GraphQL, Apollo, SvelteKit, Next.js, Node.js, Rocket, Tailwind, HTMX, LLVM/MLIR, ANTLR4
Data & Tools: PostgreSQL, OpenSearch, Sidekiq, GitHub Actions, Jenkins, Jest, AWS

Education

University of Alberta Edmonton, Alberta
Bachelor of Science in Computer Science with Specialization *September 2020 – December 2025*

Logan Travis

Projects

Prize Bot | *Go, PostgreSQL, AWS, Stripe, SvelteKit* | GitHub | Website

- Built and scaled a Go Discord bot to **1,000+ servers** and **380,000+ users**, with auctions, giveaways, and automated tickets for prize distribution.
- Built a SvelteKit dashboard for configuring the bot.
- Added Stripe subscription billing and stored bot data in PostgreSQL.

Gazprea Compiler | *C++, LLVM, MLIR, ANTLR4* | Specs

- Built a C++ compiler from scratch with ANTLR4 parsing and LLVM IR generation through MLIR.
- Implemented functions, loops, conditionals, type inference, and 2D array operations.
- Set up self-hosted GitHub Actions to run hundreds of compiler tests in parallel for benchmarking and feature coverage.
- Built a second compiler targeting x86, ARM, and RISC-V assembly.

2D Game Engine | *C++, OpenGL, SFML*

- Built a C++ engine with an entity-component-system architecture, SFML, and OpenGL shaders.
- Implemented collision physics, movement, gravity, camera controls, and animated sprites.
- Set up self-hosted GitHub Actions to verify builds across multiple platforms.

ServerSearch | *Go, PostgreSQL, Next.js, React* | Website

- Built an advertising platform for game servers using Go, PostgreSQL, and Next.js.
- Implemented organization accounts and role permissions with Discord OAuth authentication.

Multiplayer Poker Engine | *Rust, Rocket, SvelteKit* | Website

- Built a multiplayer poker server in Rust with asynchronous game loops using Rocket.
- Implemented multiple poker variants in SvelteKit with real-time WebSocket communication.

Rust Arduino Game | *Rust, Arduino, Bevy*

- Built a two-player 2D game in Rust with an Arduino and a physical breadboard controller.
- Used Bevy for game logic and display, with WebSocket communication to the Rust backend.
